Subj: PERMANENT CLOSURE OF ELECTROPLATING FACILITY, BUILDING 225

Encl: (1) COMNAVSHIPYD MARE ltr 5090 Ser 380.3/93 of 10 Aug 88

1. Per enclosure (1), Mare Island Naval Shipyard (NAVSHIPYD MARE) ceased electroplating work in Building 225 during August 1988. Since that time, the following has occurred:

a. As an Installation Restoration (IR) site, the facility and area around it have been surveyed to determine the extent of contamination. Still pending completion is the "remediation" phase of the cleanup study.

b. NAVSHIPYD MARE has arranged for most of its electroplating workload to be performed by other Department of Defense facilities. The cost and performance of the service obtained has been satisfactory.

c. The air emission permits required to operate various exhaust systems have expired. Up to two years and the expense of new exhaust equipment would be required to obtain new permits.

d. A contract has been initiated to remove and dispose of the plating solutions which still remain in the facility.

e. NAVSHIPYD MARE has determined that it would not be cost effective to attempt to reopen the Building 225 facility.

2. This letter provides notification that NAVSHIPYD MARE will permanently close the Electroplating Facility, Building 225.

L. C. HORNE
